Yes, but Webster was willing to waive the need for future monitoring if the next results were favorable (the 2009 results). By all rights he should not have done that without a risk demonstration, but he was going to.

The HW Permit requires IA monitoring because of TCE plume associated with AOC A; as well as for toluene associated with AOC B.

That was the 2009 sampling event that we reported on in 2010. The results did show an exceedance in the basement for Toluene (very significant exceedance). We argued in the 2010 report that the basement was not occupied and was considered a confined space for entry (a bit of a stretch, but Grenada Manufacturing was willing to make it a confined space). Although we had turned in the IA report, we did not hear back from EPA on their position regarding the toluene until considerably after the HSWA permit period was over and probably the final permit issued. So there was uncertainty regarding EPA would come down on the toluene issue.

When Webster said he wanted one more indoor sampling event before he would approve terminating the sampling program, what was the date of that one last sampling event? Did the results show no exceedances of action levels?

Subject: Grenada Manufacturing Draft HSWA Permit, Fact Sheet, and Public Comment Period

To keep everyone up to date on the permit renewal process, below is a brief update on recent activities:

The 45 day public comment period for the Grenada Manufacturing LLC draft HSWA permit began on May 28, 2010 and will conclude on July 12, 2010. A Public Notice was published in the Grenada Star on 5/28 and 6/1 and will also be published on 6/4 and 6/8. The Fact Sheet was mailed to a site mailing list which included local residents, local officials, and State and Federal stakeholders. Additionally, a copy of the draft permit and the Fact Sheet were left at the site information repository at the local library, and Don Williams has a copy for the facility information repository as well. Attached for your records are electronic versions of these documents.

Also, I overviewed the sludge lagoon solidification process last week with field personnel from EPA's SEDS office/Athens and was pleased to see that it is progressing very well. Field operations were very professional, and the crew was extremely hospitable and helpful in explaining the technical process, the challenges (and solutions) they have encountered, and the remaining stages of the project. Barring unforeseen delays, they are expected to complete this phase of the cleanup by end of July.

Please feel free to contact me if you have any questions or comments on the enclosed information.
